

HOW TO MAKE A

Frog Hotel

By Allison Begnell

Have you got Frogs living in your
backyard that need a home?

Why not make a Frog Hotel!

Things you will Need:

- Recycled or New PVC piping in various widths and lengths, with your main pieces being at least 75 cm tall. The widths we used were 40 – 110 mm in diameter.
- Base Container (Bucket /Pot) with NO drainage holes. It needs to be able to hold water.
- Saw (to cut pipes)
- Drill (to drill a drain hole in each pipe)
- Rocks
- Water
- Plant/s

Method:

Step 1. – Cut your PVC piping to various lengths. We suggest 75, 70, 65 & 60cm lengths. Make sure all cut edges are smooth.

Step 2. – Drill a drainage hole in each individual cut piece of pipe randomly.

Step 3. – Time to build your Hotel! Place your base container in final location and add a thin layer of rocks inside.

Step 4. – Place your pipes. You may wish to place some smaller pipes inside larger pipes to create comfortable homes for all size frogs.

Step 5. - Secure your pipes in place by adding more rocks around the outside, then add a few inside each individual pipe.

Step 6. - Add plant/s

Step 7. - Add Water to base container & individual pipes.

Step 8. - Admire your Beautiful Creation!

To maintain your Frog Hotel, make sure you check water levels every few days. Frogs prefer a damp environment!
